Maintenance Tips for the 2008 Toyota Highlander

Maintaining your 2008 Highlander is crucial for its longevity and performance. Here are some essential maintenance tips:

1. Regular Oil Changes

- Change the oil and oil filter every 5,000 to 7,500 miles, or as specified in the repair manual.
- Use high-quality synthetic oil to enhance engine performance.

2. Tire Maintenance

- Rotate tires every 5,000 to 7,500 miles to ensure even wear.
- Check tire pressure monthly and before long trips.

3. Brake System Checks

- Inspect brake pads and rotors for wear every 10,000 miles.
- Replace brake fluid as needed, typically every two years.

4. Fluid Levels

- Regularly check and top off fluid levels, including coolant, transmission fluid, brake fluid, and power

steering fluid.

- Replace coolant according to the manufacturer's recommendations.

5. Battery Maintenance

- Inspect battery terminals for corrosion and clean as needed.
- Test battery health annually, especially before winter.

Troubleshooting Guide

When facing issues with your 2008 Toyota Highlander, a systematic approach can help identify the problem. Here's a simple troubleshooting guide:

1. Check Engine Light

- Step 1: Use an OBD-II scanner to retrieve diagnostic trouble codes (DTC).
- Step 2: Reference the repair manual for code definitions.
- Step 3: Investigate the specific systems related to the codes.

2. Uneven Tire Wear

- Step 1: Inspect tire pressure and adjust as necessary.
- Step 2: Check wheel alignment and alignment settings.
- Step 3: Rotate tires if uneven wear is evident.

3. Poor Fuel Economy

- Step 1: Inspect air filters and replace if dirty.
- Step 2: Check for any exhaust leaks.
- Step 3: Ensure proper tire pressure and alignment.

4. Engine Overheating

- Step 1: Check coolant levels and top off if low.
- Step 2: Inspect for leaks in the cooling system.
- Step 3: Test the thermostat for proper function.
