6. Fuel Injection System

The fuel injection system delivers the correct amount of fuel to the engine. The 38 3800 Series 2 uses a sequential fuel injection system, which offers several advantages:

- Improved fuel efficiency
- Enhanced throttle response
- Lower emissions

7. Ignition System

The ignition system is responsible for igniting the air-fuel mixture in the cylinders. This engine typically uses a waste-spark ignition system, which includes:

- Coil packs
- Ignition control module
- Spark plugs

8. Exhaust System

The exhaust system directs combustion gases away from the engine and reduces harmful emissions.

Key components include:

- Exhaust manifold
- Catalytic converter
- Muffler and tailpipe
