LIVEWORKSHEETS

Adding and subtracting integers worksheets with answers are essential educational tools designed to help students grasp the fundamental concepts of integer operations. These worksheets provide a structured approach to understanding how to add and subtract positive and negative integers, a skill that is crucial in mathematics. The ability to work with integers is foundational, as it is applicable in various real-life situations, such as financial transactions, temperature changes, and elevation differences. This article will delve into the importance of these worksheets, provide a variety of examples, and offer answers for self-assessment.

Understanding Integers

Integers are whole numbers that can be positive, negative, or zero. They do not include fractions or decimals. For example:

- Positive integers: 1, 2, 3, ...
- Negative integers: -1, -2, -3, ...
- Zero: 0

When working with integers, it is crucial to understand the rules governing their addition and subtraction. These rules help in predicting the outcomes when combining different integers.

Rules for Adding Integers

1. Same Signs: When adding integers with the same sign, add their absolute values and keep the common sign.

- Example: $(3 + 5 = 8)$ and $(-3 + (-5) = -8)$

2. Different Signs: When adding integers with different signs, subtract the smaller absolute value from the larger absolute value and keep the sign of the integer with the larger absolute value.

- Example: $(5 + (-3) = 2)$ and $(-5 + 3 = -2)$

Rules for Subtracting Integers

1. Changing the Sign: To subtract an integer, you can add its opposite.

- Example: $(a - b = a + (-b))$

2. Same Signs: If both integers are the same sign, the result will be the difference of their absolute

values but will keep the sign.

- Example: $(5 - 3 = 2)$ and $(-5 - (-3) = -2)$

3. Different Signs: When subtracting integers with different signs, the same rules apply as in addition; subtract the smaller absolute value from the larger absolute value, and use the sign of the integer with the larger absolute value.

- Example: $(3 - 5 = -2)$ and $(-3 - 5 = -8)$

Worksheets for Practicing Adding and Subtracting Integers
