Understanding the Nervous System

The nervous system is a crucial part of human anatomy and physiology, responsible for coordinating actions and sensory information by transmitting signals to and from different parts of the body. It consists primarily of two main divisions:

1. Central Nervous System (CNS)
 - Composed of the brain and spinal cord.
 - Processes information and coordinates activity throughout the body.
2. Peripheral Nervous System (PNS)

- Includes all the nerves that branch out from the spinal cord and extend to other parts of the body.
- Divided into the somatic and autonomic nervous systems.
- The somatic nervous system controls voluntary movements, while the autonomic nervous system regulates involuntary functions.
