Fluoroscopy ARRT Exam Study Guide Questions With Correct Answers Already Passed, 2024!!

Answer-

what mag modes are available? Answer- if you have a 16" II, you can have 12,9,6, and 4.5 "

Compton effect Answer- hits the outer electron, incomplete transfer of energy, electron released and a low energy xray is deflected

photoelectric absorption Answer- x-ray totally absorbed by inner shell electron, x-ray overcomes binding energy and knock out the electron and an outer shell electron takes its place. When the outer electron moves to its new place, a characteristic x-ray is formed

what is the product of photoelectric absorption? Answer- electron flying , characteristic x-ray, and positive ion

coherent scatter Answer- aka Thompson scatter, Rayleigh scatter or classical scatter. x-ray is absorbed by entire atom and is sent off in another direction with no energy loss

does coherent scatter result in patient dose? Answer- No, this reaction only causes excitation of the atoms shells, but there is not energy transfer nor does the x-ray lose energy (isotropic)

what is the chance of coherent scatter occurring? Answer- 5%

attenuation Answer- the drop of intensity of the beam due to absorption and scatter

photoelectric interaction is dependent on Answer- Z^3 and $1/E^3$

as photon energy increases there is more Answer- penetration and a decrease in tissue interactions

Compton is dependent on Answer- energy level (the higher it is, the greater probability of occurrence), electrons/ gram
