

# Balancing Chemical Equations Gizmo Answer Key Activity B

Name: Hector CP

Date: 2022/03/11

## Gizmo Assignment: Balancing Chemical Equations

**Vocabulary:** coefficient, combustion, compound, decomposition, double replacement, element, molecule, product, reactant, single replacement, subscript, synthesis

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

The scouts are making s'mores out of toasted marshmallows, chocolate, and graham crackers.

1. What is wrong with the image below?

The materials do not match up with the s'mores in the end. For example, there are 5 marshmallows, 3 chocolate bars, and 5 graham crackers on one side while in the final picture, 8 graham crackers, 4 marshmallows and 4 chocolate bars were used total.

2. Assuming a s'more requires two graham crackers, one marshmallow, and one piece of

chocolate, how many s'mores could you make with the ingredients shown? Only 2 total.

s'mores, with 3 marshmallows, 1 chocolate bar, and 1 graham cracker left over.

### Gizmo Warm-up

In a chemical reaction, **reactants** interact to form **products**. This process is summarized by a chemical equation. In the *Balancing Chemical Equations* Gizmo, look at the floating molecules below the initial reaction:  $\text{H}_2 + \text{O}_2 \rightarrow \text{H}_2\text{O}$ .

1. How many atoms are in a hydrogen molecule ( $\text{H}_2$ )? 2

2. How many atoms are in an oxygen molecule ( $\text{O}_2$ )? 2

3. How many hydrogen and oxygen atoms are in a water molecule ( $\text{H}_2\text{O}$ )? 3 total (2 hydrogen + 1 oxygen)

4. In general, what does a **subscript** (such as the "2" in  $\text{H}_2$ ) tell you about the molecule?

**Balancing chemical equations gizmo answer key activity b** is an essential component of understanding chemical reactions in the realm of chemistry. Balancing chemical equations is crucial because it reflects the law of conservation of mass, which states that matter cannot be created or destroyed in a chemical reaction. This article will delve into the significance of balancing chemical equations, the role of the Gizmo interactive tool in learning, and a step-by-step guide to completing Activity B, along with answers and explanations.

# The Importance of Balancing Chemical Equations

Balancing chemical equations is fundamental in chemistry for several reasons:

1. **Conservation of Mass:** The primary reason for balancing equations is to adhere to the law of conservation of mass. This law stipulates that the total mass of reactants must equal the total mass of products in a chemical reaction.
2. **Understanding Reaction Stoichiometry:** Balancing equations allows chemists to understand the ratios in which substances react and the amounts of products formed. This knowledge is crucial for calculations involving reactants and products.
3. **Predicting Reaction Outcomes:** A balanced equation provides insight into the products of a reaction, helping chemists predict what will happen when certain reactants are combined.
4. **Supporting Real-World Applications:** From industrial processes to pharmaceuticals, balanced chemical equations are used to ensure that reactions occur efficiently and safely.

## Introduction to Gizmo Interactive Learning Tool

Gizmo is an online simulation tool designed to enhance the learning experience of students in various scientific disciplines, including chemistry. The platform provides interactive activities that allow students to visualize complex concepts, conduct virtual experiments, and engage in hands-on learning.

In the context of balancing chemical equations, Gizmo offers an array of resources that help students practice and master the technique of equation balancing. Activity B, in particular, focuses on guiding students through the process of balancing different chemical reactions.

## Overview of Activity B

Activity B in the Balancing Chemical Equations Gizmo is structured to help students learn the systematic approach to balancing equations. This activity typically includes:

- **Identifying Reactants and Products:** Students are introduced to the concept of reactants (the substances that undergo a reaction) and products (the substances formed as a result of the reaction).

- **Using Coefficients:** Students learn how to use coefficients to balance chemical equations, ensuring that the number of atoms of each element is the same on both sides of the equation.
- **Practice Exercises:** The activity provides various chemical equations for students to balance, reinforcing the concepts learned.

## Step-by-Step Guide to Balancing Chemical Equations

To successfully balance chemical equations, students can follow these systematic steps:

1. **Write the Unbalanced Equation:** Start with the chemical equation that needs to be balanced. For example, consider the combustion of methane:

2. **Count the Atoms:** Count the number of atoms of each element on both sides of the equation.

- **Reactants:**

- C: 1 (from CH<sub>4</sub>)
- H: 4 (from CH<sub>4</sub>)
- O: 2 (from O<sub>2</sub>)

- **Products:**

- C: 1 (from CO<sub>2</sub>)
- H: 2 (from H<sub>2</sub>O)
- O: 3 (2 from CO<sub>2</sub> and 1 from H<sub>2</sub>O)

3. **Balance One Element at a Time:** Start balancing elements that appear in only one reactant and one product first.

- **Balance Hydrogen:** To balance hydrogen, you can add a coefficient of 2 in front of H<sub>2</sub>O:

4. **Recount the Atoms:** After updating the equation, recount the atoms:

- **Reactants:** C: 1, H: 4, O: 2
- **Products:** C: 1, H: 4, O: 3

5. **Balance Oxygen Last:** Now, to balance the oxygen, you need 4 oxygen atoms on the reactants' side. You can achieve this by adding a coefficient of 2 in front of O<sub>2</sub>:

\]

6. Final Check: Ensure that all elements are balanced:

- Reactants: C: 1, H: 4, O: 4
- Products: C: 1, H: 4, O: 4

The equation is now balanced.

## Gizmo Activity B Answer Key

While the specific equations in Activity B can vary, the following examples illustrate the type of chemical reactions you might encounter, along with their balanced equations:

1. Example 1:

- Unbalanced:  $\text{Fe} + \text{O}_2 \rightarrow \text{Fe}_2\text{O}_3$
- Balanced:  $4\text{Fe} + 3\text{O}_2 \rightarrow 2\text{Fe}_2\text{O}_3$

2. Example 2:

- Unbalanced:  $\text{C}_3\text{H}_8 + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}$
- Balanced:  $\text{C}_3\text{H}_8 + 5\text{O}_2 \rightarrow 3\text{CO}_2 + 4\text{H}_2\text{O}$

3. Example 3:

- Unbalanced:  $\text{Na} + \text{Cl}_2 \rightarrow \text{NaCl}$
- Balanced:  $2\text{Na} + \text{Cl}_2 \rightarrow 2\text{NaCl}$

## Conclusion

Understanding how to balance chemical equations is a foundational skill in chemistry that provides insight into the nature of chemical reactions. Utilizing tools like Gizmo enhances this learning experience by offering interactive and engaging activities that reinforce these concepts. Activity B of the balancing chemical equations Gizmo is designed to guide students through the process step-by-step, ensuring a solid understanding of how to apply the law of conservation of mass in chemical reactions. By practicing the techniques outlined in this article, students can gain confidence in their ability to balance equations and apply these skills to real-world chemical scenarios.

## Frequently Asked Questions

## **What is the first step in balancing a chemical equation using the Gizmo activity?**

The first step is to identify the number of atoms of each element present in the reactants and products.

## **How does the Gizmo help students understand the law of conservation of mass?**

The Gizmo visually demonstrates that the number of atoms of each element remains constant before and after a reaction, reinforcing the concept of conservation of mass.

## **What strategies can be used to balance complex chemical equations in the Gizmo?**

Strategies include starting with the most complex molecule, balancing one element at a time, and adjusting coefficients systematically.

## **Can the Gizmo activity provide instant feedback on balancing attempts?**

Yes, the Gizmo provides immediate feedback, allowing students to see if their equation is balanced and guiding them to make necessary adjustments.

## **What is a common mistake students make when using the Gizmo to balance equations?**

A common mistake is changing the subscripts in chemical formulas instead of adjusting the coefficients, which alters the compounds themselves.
