Development and History

Origins of the C-17

The development of the C-17 Globemaster III began in the early 1980s, during a period when the U.S. Air Force recognized the need for a strategic airlift aircraft that could operate from austere airfields. The Aircraft was intended to replace the aging Lockheed C-141 Starlifter.

In 1986, McDonnell Douglas won the contract to develop the C-17, with its first flight taking place on September 15, 1991. The aircraft was designed to meet a wide variety of operational requirements, including the ability to transport oversized cargo, rapid airlift capabilities, and short takeoff and landing (STOL) performance.

Production and Service

Production of the C-17 began in the early 1990s, with the first aircraft entering service in 1995. The C-17 program faced significant challenges, including cost overruns and production delays. Nevertheless, it proved its worth during operations in the late 1990s and early 2000s, particularly

during the Kosovo War and the Global War on Terror.

In total, 279 C-17s were built before production ended in 2015. The aircraft has been utilized by the U.S. Air Force and several allied nations, including the Royal Air Force and the Royal Australian Air Force.
