

# Chemistry Matter And Change Chapter 14 Study Guide

Now \_\_\_\_\_ Day \_\_\_\_\_ Class \_\_\_\_\_

**CHAPTER 13 STUDY GUIDE FOR CONTENT MASTERY**

## States of Matter

### Section 13.1 Gases

In your textbook, read about the kinetic molecular theory.

Complete each statement.

- The kinetic molecular theory describes the behavior of gases in terms of particles in motion.
- The kinetic molecular theory makes the following assumptions:
  - In a sample of a gas, the volume of the gas particles themselves is very small compared to the volume of the sample.
  - Because gas particles are far apart, there are no significant attractive or repulsive forces between gas particles.
  - Gas particles are in constant and random motion.
  - The collisions between gas particles are elastic, that is, no kinetic energy is lost.
- The kinetic energy of a particle is represented by the equation  $KE = \frac{1}{2}mv^2$ .
- Temperature is a measure of the average kinetic energy of the particles in a sample of matter.

In your textbook, read about explaining the behavior of gases.

For each statement below, write *true* or *false*.

<u>True</u>	1. Gases are less dense than solids because there is a lot of space between the particles of a gas.
<u>True</u>	2. The random motion of gas particles causes a gas to expand until it fills its container.
<u>False</u>	3. The density of a gas decreases as it is compressed.
<u>True</u>	4. A gas can flow into a space occupied by another gas.
<u>True</u>	5. The diffusion of a gas is caused by the random motion of the particles of the gas.
<u>False</u>	6. Lighter gas particles diffuse less rapidly than do heavier gas particles.
<u>True</u>	7. During effusion, a gas escapes through a tiny opening into a vacuum.
<u>False</u>	8. Graham's law of effusion states that the rate of effusion for a gas is directly related to the square root of its molar mass.

### Section 13.2

In your textbook, read about gas pressure.

Circle the letter of the choice that best completes the statement or answers the question.

- Pressure is defined as force per unit area.  
☐ a. mass      ☐ b. time      ☐ c. volume      ☐ d. density
- What is an instrument designed to measure atmospheric pressure?  
☐ a. barometer      ☐ b. thermometer      ☐ c. sphygmomanometer      ☐ d. manometer
- The height of the liquid in a barometer is affected by all of the following EXCEPT the density of the liquid in the column.  
☐ a. altitude      ☐ b. atmospheric pressure      ☐ c. diameter of the column tube      ☐ d. temperature
- The pressure of the gas in a manometer is directly related to which of the following quantities?  
☐ a. height of the mercury column in the closed-end arm      ☐ b. height of the mercury column in the open-end arm  
☐ c.  $a + b$       ☐ d.  $a - b$
- One atmosphere is equal to a pressure of 101.3 kPa.  
☐ a. 760 mm Hg      ☐ b. 147 psi      ☐ c. 760 mm      ☐ d. 760 cm
- The partial pressure of a gas depends on all of the following EXCEPT the concentration of the gas.  
☐ a. concentration of the gas      ☐ b. size of the container      ☐ c. identity of the gas      ☐ d. temperature of the gas
- The pressure of a sample of air in a manometer is 102.1 kPa. What is the partial pressure of nitrogen ( $N_2$ ) in the sample if the combined partial pressures of the other gases is 22.4 kPa?  
☐ a. 124.5 kPa      ☐ b. 79.7 kPa      ☐ c. 102.1 kPa      ☐ d. 124.7 kPa

Use the figure to answer the following questions.

20. What instrument is illustrated in the figure? Barometer

21. What inventor's name(s)? Evangelista Torricelli

22. What are the two opposing forces that control the height of the mercury in the column?  
gravity and atmospheric pressure

23. What does it mean when the level of mercury rises in the column?  
The atmospheric pressure has increased.

14      Chemistry Matter and Change • Chapter 13      Study Guide for Content Mastery

**Chemistry Matter and Change Chapter 14 Study Guide** is an essential resource for students looking to deepen their understanding of chemical reactions, equilibrium, and various concepts related to solutions. This chapter introduces fundamental principles that are crucial for mastering more complex topics in chemistry. In this study guide, we will explore the key concepts, important definitions, and study tips to help you prepare effectively for your exams.

## Understanding Chemical Reactions

Chemical reactions are fundamental processes that involve the transformation of reactants into products. Chapter 14 delves into the different types of reactions and how to balance chemical equations, which is a critical skill in chemistry.

## Types of Chemical Reactions

There are several types of chemical reactions, each characterized by specific changes in the reactants and products. The primary types include:

- **Synthesis Reactions:** Two or more substances combine to form a single product.

- **Decomposition Reactions:** A single compound breaks down into two or more simpler products.
- **Single Replacement Reactions:** One element replaces another in a compound.
- **Double Replacement Reactions:** The anions and cations of two different compounds exchange places.
- **Combustion Reactions:** A substance combines with oxygen, releasing energy in the form of light or heat.

## Balancing Chemical Equations

Balancing chemical equations is crucial for understanding the law of conservation of mass. Here's how to balance a chemical equation:

1. Write the unbalanced equation.
2. Count the number of atoms of each element on both sides.
3. Use coefficients to balance the number of atoms for each element.
4. Check your work to ensure that all elements are balanced.

## The Concept of Chemical Equilibrium

Chemical equilibrium occurs when the rates of the forward and reverse reactions are equal, resulting in constant concentrations of reactants and products. Understanding this concept is vital for predicting how changes in conditions affect a reaction.

## Factors Affecting Equilibrium

Several factors can influence chemical equilibrium, including:

- **Concentration:** Changing the concentration of reactants or products shifts the equilibrium position.
- **Temperature:** Increasing or decreasing temperature can favor either the forward or reverse reaction, depending on whether the reaction is exothermic or endothermic.
- **Pressure:** For reactions involving gases, increasing pressure shifts the equilibrium toward the side with fewer moles of gas.

## Le Chatelier's Principle

Le Chatelier's Principle states that if a system at equilibrium is subjected

to a change in concentration, temperature, or pressure, the system will adjust to counteract that change and restore a new equilibrium. This principle is essential for predicting the behavior of chemical systems under various conditions.

## Solutions and Their Properties

Chapter 14 also covers solutions, which are homogeneous mixtures of two or more substances. Understanding the properties of solutions is fundamental to many applications in chemistry, including reactions, concentrations, and solubility.

### Types of Solutions

Solutions can be classified based on their composition:

- **Liquid Solutions:** Composed of liquids and solutes, such as saltwater.
- **Gaseous Solutions:** Mixtures of gases, such as air.
- **Solid Solutions:** Alloys, such as bronze, which contain multiple metallic elements.

### Concentration of Solutions

The concentration of a solution refers to the amount of solute present in a given quantity of solvent or solution. Common units of concentration include:

- Molarity (M): Moles of solute per liter of solution.
- Molality (m): Moles of solute per kilogram of solvent.
- Percent Concentration: Often expressed as mass percent or volume percent.

### Understanding Solubility

Solubility is the ability of a substance to dissolve in a solvent at a given temperature and pressure. Various factors influence solubility, including:

#### Factors Affecting Solubility

1. Temperature: Generally, solubility of solid solutes increases with temperature, while gas solubility decreases.
2. Pressure: For gaseous solutes, increasing pressure increases solubility (Henry's Law).
3. Nature of the Solute and Solvent: Polar solutes tend to dissolve in polar solvents, while nonpolar solutes dissolve in nonpolar solvents (like

dissolves like).

## Practical Applications of Chemistry

Chapter 14 not only focuses on theoretical aspects but also emphasizes practical applications of chemistry in real-world scenarios.

### Applications in Industry

Understanding chemical reactions and solutions has numerous applications in various industries, including:

- **Pharmaceuticals:** Development of medications relies on chemical reactions and solution chemistry.
- **Environmental Science:** Knowledge of chemical equilibria is crucial in pollution control and remediation efforts.
- **Food Chemistry:** Chemical reactions are essential in food preservation and flavor enhancement.

### Study Tips for Mastering Chapter 14

To effectively study the material covered in Chapter 14, consider the following tips:

1. **Utilize Visual Aids:** Diagrams and charts can help visualize complex concepts like equilibrium shifts and reaction mechanisms.
2. **Practice Problems:** Work through a variety of chemical equations and equilibrium problems to reinforce your understanding.
3. **Group Study:** Collaborating with peers can help clarify difficult topics and enhance retention.
4. **Use Flashcards:** Create flashcards for key definitions and concepts for quick review.

## Conclusion

The **Chemistry Matter and Change Chapter 14 Study Guide** provides a comprehensive overview of essential concepts related to chemical reactions, equilibrium, and solutions. By understanding these fundamental topics, students can build a solid foundation for more advanced studies in chemistry. With diligent study and application of the tips provided, mastering this chapter will pave the way for success in future chemistry courses.

## Frequently Asked Questions

**What are the main concepts covered in Chapter 14 of**

## **the Chemistry Matter and Change study guide?**

Chapter 14 focuses on the principles of chemical kinetics, including reaction rates, factors affecting rates, and the collision theory.

### **How does temperature affect reaction rates as discussed in Chapter 14?**

According to Chapter 14, increasing the temperature generally increases reaction rates because it provides reactants with more energy, leading to more frequent and effective collisions.

### **What role does concentration play in chemical reactions according to Chapter 14?**

Chapter 14 explains that higher concentrations of reactants typically lead to increased reaction rates due to a greater number of collisions between reactant particles.

### **What is the collision theory mentioned in Chapter 14?**

The collision theory states that for a reaction to occur, reactant particles must collide with sufficient energy and proper orientation; this concept is crucial in understanding factors that affect reaction rates.

### **Can you explain the concept of activation energy as highlighted in Chapter 14?**

Activation energy is the minimum amount of energy required for a reaction to occur. Chapter 14 discusses how this energy barrier can be overcome through factors like temperature and catalysts.
