## Understanding the Cognitive Triangle

The cognitive triangle is a foundational concept in cognitive behavioral therapy. It posits that our thoughts, feelings, and behaviors are interconnected and can influence one another. Understanding this triangle is essential for individuals seeking to improve their mental health and emotional well-being.

## Components of the Cognitive Triangle

1. **Thoughts:** These are the beliefs and perceptions we have about ourselves, others, and the world around us. Negative or distorted thoughts can lead to undesirable feelings and behaviors.
2. **Feelings:** This refers to our emotional responses to situations. Our feelings can be affected by our thoughts and can, in turn, influence our behaviors.
3. **Behaviors:** These are the actions we take in response to our thoughts and feelings. Behaviors can reinforce negative thoughts and feelings, creating a cycle that can be difficult to break.

Start by selecting a specific situation or event that triggered negative feelings or behaviors. It could be anything from a stressful work situation to a conflict with a friend. Write this down at the top of your worksheet.

## Step 2: Record Your Thoughts

In the section dedicated to thoughts, jot down everything that comes to mind regarding the situation. Consider the following prompts:

- What went through your mind when the situation occurred?
- Did you have any automatic negative thoughts?
- Were there any beliefs that influenced your perception of the event?

## Step 3: Analyze Your Feelings

Next, move on to the feelings section. Reflect on how you felt during and after the situation. Use the following questions to guide you:

- What emotions did you experience?
- On a scale from 1 to 10, how intense were these feelings?
- Were these feelings temporary, or did they linger?

## Step 4: Examine Your Behaviors

In the behaviors section, describe how you reacted to the situation. Consider the following:

- What actions did you take in response to your feelings?
- Did your behavior contribute to the problem or help resolve it?
- How did your behaviors affect your feelings afterward?

## Step 5: Identify Patterns and Reframe Thoughts

After completing the worksheet, review your entries. Look for patterns in your thoughts, feelings, and behaviors. Ask yourself:

- Are there recurring negative thoughts?
