The Study of the use of language in context... deals with how listeners arrive at intended meaning of speaking. - Correct Answer Pragmatics

The Branch of linguistics which studies how sounds are organized, and used in natural language.
Ex: time [t] & dime [d] Identical words, except beginning sounds. - Correct Answer Phonology

Phones which are phonetically similar but not the same and which are treated as the same in linguistic communication; or the sound which are phonetically different but do not make one word different from another in meaning.
Ex: pat, spin, cup
These are sounds that are perceptibly different but do not distinguish words.
P^h - Pat (aspirated)
P- Spin (not aspirated)
P^o- Cup (your lips remain closed; /p/ is unreleased) - Correct Answer Allophone

Is a set of multiple spoken sounds (or phones) used to pronounce a single phoneme. For example, [p^h] (as in pin) and [p] (as in spin) are multiple spoken sounds for the phoneme /p/ in the English language. Although a phoneme's variation of spoken sounds are all alternative pronunciations for a phoneme, the specific alternative sound selected in a given situation is often predictable. Changing the alternative sounds used by native speakers for a given phoneme in a specific context usually will not change the meaning of a word but the results may sound non-native or unintelligible. Native speakers of a given language usually perceive one phoneme in their language as a single distinctive sound in that language and are "both unaware of and even shocked by "all the different variations used to pronounce single phonemes. - Correct Answer Allophone

The study of the structure of the words and how words are formed. - Correct Answer Morphology
