Understanding Diabetes

Diabetes is a metabolic disorder characterized by high blood sugar levels over a prolonged period. It occurs either due to insufficient insulin production or the body's cells not responding effectively to insulin. There are several forms of diabetes, primarily categorized into Type 1, Type 2, and gestational diabetes.

Types of Diabetes

1. Type 1 Diabetes: An autoimmune condition where the immune system attacks insulin-producing beta cells in the pancreas.
2. Type 2 Diabetes: The most common form, often associated with obesity and sedentary lifestyles, where the body becomes resistant to insulin.
3. Gestational Diabetes: A temporary form of diabetes that occurs during pregnancy and typically resolves after childbirth.
