3. Installation Process

Setting up your eero model j01001 is a straightforward process. Follow the steps below to get your network up and running:

3.1 Pre-Installation Checklist

Before you begin the installation, gather the following:

- A smartphone or tablet with the eero app installed (available for iOS and Android).
- A reliable internet connection from your Internet Service Provider (ISP).
- The credentials (username and password) for your ISP.

3.2 Step-by-Step Installation

1. Choose the Right Location:
- Place your eero in a central location in your home for optimal coverage.
- Avoid placing it near metal objects or appliances that may interfere with

the signal.

2. Connect to Power:
- Plug the power adapter into the eero and connect it to an electrical outlet.
- Wait for the LED light on the device to blink white, indicating it is ready to be set up.

3. Connect to Your Modem:
- Use the Ethernet cable to connect the eero to your modem (or existing router if you're using it in bridge mode).
- If you are connecting multiple eeros, connect them to each other using Ethernet cables for the best performance.

4. Download and Open the eero App:
- Open the app and create an eero account if you don't already have one.
- Follow the on-screen instructions to add your eero device.

5. Network Name and Password:
- You will be prompted to create a network name (SSID) and password.
- Choose a secure password and save it for future reference.

6. Finalize Setup:
- Once you complete the app setup, the LED light should turn solid white, indicating a successful connection.
- If you have additional eero devices, repeat the process for each one.

4. Managing Your eero Network

After setting up your eero model j01001, you can manage your network settings through the eero app.

4.1 Adding Additional eero Devices
