- Levels of Structural Organization: Understanding how cells form tissues, tissues form organs, and organs form systems.
- Homeostasis: The body's ability to maintain stable internal conditions despite external changes.

2. The Integumentary System

The integumentary system, which includes the skin, hair, and nails, plays a vital role in protection, regulation, and sensation.

- Functions:
 - Protection from external damage
 - Regulation of body temperature
 - Sensory reception

3. The Skeletal System

The skeletal system provides structure, support, and protection for vital organs.

- Components:
 - Bones
 - Cartilages
 - Joints
- Functions:
 - Framework for body shape
 - Mineral storage (calcium and phosphorus)
 - Blood cell production in bone marrow

4. The Muscular System

Muscle tissue is responsible for movement and maintaining posture.

- Types of Muscle:
- Skeletal Muscle: Voluntary and striated, attached to bones.
- Cardiac Muscle: Involuntary, found in the heart.
- Smooth Muscle: Involuntary, found in walls of hollow organs.

5. The Nervous System

The nervous system is the control center of the body, responsible for processing information and coordinating bodily functions.

- Divisions:
- Central Nervous System (CNS): Brain and spinal cord.
- Peripheral Nervous System (PNS): Nerves extending throughout the body.

6. The Endocrine System

This system regulates bodily functions through hormones.

- Major Glands:
- Pituitary
- Thyroid
- Adrenal
- Functions:
- Regulation of metabolism
- Control of growth and development
- Response to stress

7. The Cardiovascular System

The cardiovascular system consists of the heart and blood vessels, transporting nutrients, gases, and waste products.

- Components:
- Heart
- Blood vessels (arteries, veins, capillaries)
- Functions:
- Delivery of oxygen and nutrients to tissues
- Removal of carbon dioxide and wastes

8. The Respiratory System

The respiratory system facilitates gas exchange, allowing oxygen to enter the body and carbon dioxide to be expelled.

- Key Structures:

- Lungs
- Trachea
- Bronchi

- Functions:

- Oxygenation of blood
- Regulation of blood pH

9. The Digestive System

This system breaks down food into nutrients for energy, growth, and cell repair.

- Major Organs:

- Mouth
- Stomach
- Intestines

- Processes:

- Ingestion
- Digestion
- Absorption

10. The Urinary System

The urinary system removes waste products from the blood and regulates water and electrolyte balance.

- Components:

- Kidneys
- Ureters
- Bladder

- Functions:

- Filtration of blood
- Regulation of blood volume and pressure

11. The Reproductive System

The reproductive system is involved in the production of offspring.
