Understanding Engineering Design

Engineering design is a systematic, intelligent process that transforms the needs and requirements of stakeholders into a solution. It encompasses various stages, including:

1. Problem Identification: Understanding the needs of the users and defining the problem.
2. Research and Analysis: Gathering relevant information and analyzing existing solutions.
3. Concept Development: Generating a range of ideas and potential solutions.
4. Evaluation and Selection: Assessing and selecting the most feasible design concepts.
5. Detailed Design: Developing detailed specifications and plans.
6. Implementation: Bringing the design to life through production or construction.
7. Testing and Feedback: Validating the solution against requirements and iterating as necessary.

The engineering design process is iterative, often requiring multiple cycles through these stages to refine ideas and achieve optimal solutions.
