

# Example Of Philosophy In Education

## Philosophy of Education

Therese D. O'Neil, M.Ed.

Since the beginning of my teaching career, September of 1974, my educational philosophy has intensified; drawn from experiences. One develops a fuller knowledge of his/her discipline with each year taught. I have grown immensely in my teaching. Of paramount importance, I have learned, is the organization of course materials; syllabi, course outlines, methods of teaching, daily activities, good old-fashioned lesson plans.

It is my job to meet the academic needs of the student; however, my teaching style is one that puts learning in the hands of the student. To better understand my audience, I have the students fill out a Learning Style survey on the first day of class. Upon answering the questions, the students discover their particular learning style. This not only helps me to better present a lesson to them, by teaching toward their learning style, it allows the student to take more responsibility for their learning; an essential quality for every student. It is a part of my philosophy that students take responsibility for their learning.

Another aspect of teaching I take very seriously is to understand that the student is an individual. Students bring baggage into the classroom. I see the non-traditional student as well as the traditional student. Sometimes one needs to teach study skills, time management, or individualizing to a particular need. I believe that all students, even the unprepared or at risk, can become lifelong learners. Once students discover that they can be successful, they can make tremendous improvements and become excellent (or very good) students...It is my responsibility to assist the student realize his/her academic potential.

Expectations: I expect the student to attend class, pay attention, and participate. It takes time and effort on the part of the student and the instructor to insure success in the classroom whether it is online or brick-and-mortar. Good communication is essential for an educator to instill that principle. Students need assurance that the instructor is available to them through office hours and/or special appointments. It takes commitment and time to educate successfully.

Policies: The instructor needs policies in place. As Weimer (2002) suggests, professors "need policies and practices that encourage students to encounter themselves as learners, motivate them to become more than what they are, and provide the resources, experiences, and skills they need if they are to move forward in their development" (p.III). I accomplish this by having a strict attendance policy, discuss academic integrity, the learning style inventory previously discussed, tutoring, mentoring; generally keeping the communication line open.

Lastly, I feel that instructors should never do for students what they can do for themselves. It was legendary University of California, Los Angeles basketball coach John Wooden (1997) who wrote: "Why can't we realize that it only weakens those we

Example of philosophy in education is a critical area of exploration that shapes how we understand and implement teaching and learning practices. Philosophy in education involves examining the fundamental nature of education itself, the role of educators, and the purpose of schooling. This intersection of philosophy and pedagogy not only influences curriculum design and teaching methods but also helps in addressing ethical considerations in the educational landscape. This article will delve into various philosophical frameworks that underpin educational practices and provide concrete examples of how these philosophies manifest in real-world educational settings.

## Understanding Educational Philosophy

Philosophy in education is rooted in several foundational questions: What is the purpose of

education? What knowledge is most valuable? How should teaching and learning take place? These questions guide educators in framing their teaching strategies and curricular choices. Several major philosophical movements inform educational practices:

1. Idealism
2. Realism
3. Pragmatism
4. Existentialism
5. Constructivism

Each of these philosophies offers unique perspectives on teaching, learning, and the overall educational experience.

## **Idealism**

Idealism posits that reality is rooted in ideas and the mind. In education, this philosophy emphasizes the importance of teaching students about moral values, ethics, and the pursuit of truth. Idealist educators focus on developing the intellect and character of students through a rigorous curriculum.

Examples of Idealism in Education:

- Classical Education: Many classical education models emphasize the study of great works of literature, philosophy, and history. This approach encourages critical thinking and the exploration of timeless ideas.
- Socratic Method: The Socratic method, whereby teachers engage students in dialogue to stimulate critical thinking and illuminate ideas, is rooted in idealist philosophy. This method promotes deep understanding rather than rote memorization.

## **Realism**

Realism, in contrast to idealism, asserts that reality exists independently of our perceptions. Realist educators focus on teaching students about the physical world and encourage them to engage with empirical evidence and scientific inquiry.

Examples of Realism in Education:

- Science Education: A realist approach is evident in the emphasis on hands-on experiments in science classes, where students learn through observation, experimentation, and discovery.
- Practical Skills Training: Vocational education that prepares students for specific careers, such as carpentry or plumbing, reflects realism by prioritizing practical knowledge and real-world applications.

## **Pragmatism**

Pragmatism is a philosophy that evaluates theories or beliefs based on their practical

applications and consequences. In education, pragmatism encourages experiential learning, where students engage in real-life problem-solving.

Examples of Pragmatism in Education:

- Project-Based Learning: In project-based learning environments, students work on projects that reflect real-world challenges. This approach allows them to apply their knowledge and collaborate with peers.
- Service Learning: Programs that integrate community service with academic learning demonstrate pragmatic principles by allowing students to engage with their community while developing critical thinking and social responsibility.

## **The Role of Philosophy in Curriculum Design**

Philosophy plays a significant role in shaping curriculum design. The chosen philosophical framework influences the selection of content, teaching methods, and assessment strategies. Here are some key considerations:

### **Curriculum Development Based on Philosophical Frameworks**

1. Content Selection: The philosophical stance of educators often determines what knowledge is deemed essential. For instance:
  - An idealist curriculum may prioritize classical literature and moral philosophy.
  - A realist curriculum may focus on scientific principles and technology.
2. Teaching Methods: Different philosophies advocate for distinct pedagogical approaches:
  - Idealism: Emphasizes discussion and debate to foster critical thinking.
  - Pragmatism: Encourages hands-on activities and real-world problem-solving.
3. Assessment Strategies: Philosophical beliefs also shape how student learning is evaluated:
  - Constructivist Approaches: Focus on formative assessments that promote self-reflection and ongoing learning.
  - Behaviorist Approaches: Use standardized testing to measure student performance based on observable behaviors.

### **Case Studies of Educational Philosophy in Action**

Examining real-life educational settings can illustrate how philosophical principles inform teaching practices. Here are a few case studies:

1. Montessori Education: Rooted in constructivism, Montessori schools emphasize self-directed learning and hands-on activities. Teachers act as guides, fostering independence and encouraging students to explore their interests.

2. Democratic Schools: Schools like Sudbury Valley School embody democratic principles by allowing students to have a say in their education. Students choose what they learn and how they spend their time, emphasizing personal responsibility and community involvement.

3. International Baccalaureate (IB): The IB program integrates elements from various philosophies, focusing on developing global citizens who engage with complex issues. It promotes inquiry-based learning, critical thinking, and intercultural understanding.

## **Ethical Considerations in Educational Philosophy**

Ethics are integral to educational philosophy, guiding educators in making decisions that affect students' lives. Ethical considerations help ensure that education is equitable, inclusive, and respectful of diverse perspectives.

### **Key Ethical Principles in Education**

1. Equity: Ensuring all students have access to quality education regardless of their backgrounds.
2. Inclusivity: Valuing diversity and creating an environment where every student feels valued and supported.
3. Integrity: Upholding honesty and fairness in assessments and interactions with students.

### **Challenges in Balancing Philosophical Perspectives**

Educators often face challenges in balancing competing philosophical perspectives. For instance, the push for standardized testing can conflict with constructivist approaches that prioritize individualized learning. Navigating these tensions requires critical reflection and a commitment to ethical principles.

## **Conclusion**

In conclusion, the example of philosophy in education serves as a foundation for understanding how various philosophical frameworks influence teaching and learning. By examining idealism, realism, pragmatism, and other philosophies, we gain insights into the complexities of educational practices. As educators navigate the challenges of curriculum design, teaching methods, and ethical considerations, a solid philosophical grounding can enhance their effectiveness and promote meaningful learning experiences for students. Ultimately, philosophy in education is not just an abstract concept; it is a dynamic force that shapes the future of education and the lives of students.

# **Frequently Asked Questions**

## **What is the role of pragmatism in education?**

Pragmatism in education emphasizes the importance of real-world experiences and practical applications of knowledge, encouraging students to engage with their environment and develop critical thinking skills.

## **How does constructivism influence teaching methods?**

Constructivism suggests that learners construct their own understanding and knowledge through experiences. This philosophy influences teaching methods by promoting active learning, collaboration, and problem-solving activities.

## **What is the significance of existentialism in the classroom?**

Existentialism focuses on individual choice and personal responsibility, encouraging students to find their own meaning in education and fostering self-directed learning and critical self-reflection.

## **Can you give an example of Socratic questioning in education?**

Socratic questioning involves prompting students to think deeply about their beliefs and assumptions. For example, a teacher might ask, 'What do you mean by that?' or 'How did you arrive at that conclusion?' to stimulate critical thinking.

## **How does the philosophy of essentialism shape curriculum design?**

Essentialism emphasizes a core set of knowledge and skills that all students should acquire, leading to a curriculum that focuses on traditional subjects and essential academic content.

## **What impact does humanism have on student-teacher relationships?**

Humanism fosters a supportive and nurturing classroom environment, emphasizing the importance of emotional and social development, which helps build stronger, more empathetic relationships between students and teachers.

## **How is critical pedagogy applied in modern classrooms?**

Critical pedagogy encourages educators to challenge social injustices and empower students to question societal norms, often involving discussions around power dynamics, equity, and social change in the curriculum.

## What is the relationship between philosophy and educational policy?

Philosophy informs educational policy by providing foundational ideas about the purpose of education, values, and the role of the state, influencing decisions on curriculum standards, assessment methods, and educational equity.

## How can a pluralistic approach benefit educational practices?

A pluralistic approach acknowledges diverse perspectives and values in education, allowing for inclusive practices that cater to different cultural backgrounds, learning styles, and individual needs, thereby enriching the educational experience.
