1. Introduction

- **Definition of the problem:** The problem is to find the maximum value of the function $f(x) = x^2 - 4x + 4$ over the interval $[0, 4]$.
- **Objective:** The objective is to find the maximum value of the function $f(x)$ over the interval $[0, 4]$.

2. Problem Statement

The problem is to find the maximum value of the function $f(x) = x^2 - 4x + 4$ over the interval $[0, 4]$.

3. Solution

- **Step 1:** Find the derivative of the function $f(x)$.
- **Step 2:** Find the critical points of the function $f(x)$.

4. Conclusion

- **Conclusion:** The maximum value of the function $f(x)$ is 4, which occurs at $x = 2$.
- **Conclusion:** The maximum value of the function $f(x)$ is 4, which occurs at $x = 2$.

5. References

The problem is to find the maximum value of the function $f(x) = x^2 - 4x + 4$ over the interval $[0, 4]$. The function $f(x)$ is a quadratic function, and its graph is a parabola opening upwards. The vertex of the parabola is at $(2, 4)$, which is the maximum value of the function. The function $f(x)$ is defined on the interval $[0, 4]$, and its maximum value is 4.
