Foundation Basics

Name: _____

Founded on Foundational Foundations

If you've ever been in a building's basement, you've seen the building's foundation. Even if you've never been in a basement, the very top of a building's foundation can often be seen from the outside. Foundations are pretty important. Buildings don't do very well without them. Traditionally, foundations have been made out of blocks or stones—pieces that fit together to create a strong, solid base for the building to sit on.

You can think of the "foundations" of government as the pieces that fit together to create a base that a government sits on. Except these pieces aren't stones. They're ideas. Some of these ideas are broad concepts that are foundational to any government, while others are unique to a specific government or a certain way of thinking about government.

Meet Your PALS

All governments have characteristics that you can analyze. Four of the most basic characteristics you can look at in any government are power, authority, legitimacy, and sovereignty:

- **Power** is the ability to get people to behave in certain ways even when people don't want to behave in those ways. Think of power as the *ability* to rule.
- **Authority** is the *right* to rule.
- **Legitimacy** is a society's *belief* that their ruler or government has the right to rule.
- **Sovereignty** is the supreme and ultimate power or authority within a territory. The buck stops with whoever has sovereignty.

Are there different ways to get power? Authority? Are there different ways to get people to believe in their government's authority? There sure are, and not all of them are nice. But the most basic analysis of a government's PALS is about the *what*, not the *how*. A government either has these characteristics or it doesn't. Did the government get its PALS by torturing the people into submission? Or did the people get to fill out a ballot while sipping a skinny latté? PALS can exist either way. PALS are the cold, functional blocks at the very bottom of the foundation.

The How Matters

In November 2017, a North Korean soldier was shot several times by his fellow soldiers while making a desperate dash across the border to South Korea. The soldier lived, but what really fascinated the world was what doctors treating him found in his intestines: Parasitic worms. Huge ones—the kind that even surprised the doctors. The North Korean government has serious PALS, which it maintains by doing things like shoot people who try to leave the country. How else could it control citizens who are so poorly cared for that even someone in the military has parasites big enough to shock people in modern nations?

How a government gets and maintains its power, authority, legitimacy, and sovereignty can make a big difference in the lives of its people. Living under the rule of a leader who would rather kill people than let them leave could be very different from living under the rule of a government that gets its PALS from a constitution written by the people. That's why, most of the time, people don't analyze the *what* of PALS—they analyze the *how*.
