- Leveling feet (if not pre-installed)

Installation Steps

The installation process for the GE JGB735SPSs can be broken down into several key steps, which are outlined below.

Step 1: Prepare the Installation Area

- Clear the Space: Remove any existing appliances or obstructions from the area where the range will be installed.
- Check for Proper Ventilation: Ensure that the range will be adequately ventilated to prevent gas buildup.
- Level the Floor: Use a level to check the floor where the range will sit. If it is uneven, use shims to level the surface.

Step 2: Connect the Gas Supply Line

- Locate the Gas Shut-Off Valve: Ensure that the valve is in the off position before beginning.
- Attach the Gas Line: Use the adjustable wrench to connect the gas supply line to the range’s gas inlet.
- Check for Leaks: After connecting, use a mixture of soap and water to check for gas leaks around the connection. If bubbles form, there may be a leak that needs addressing.

Step 3: Electrical Connection

- Verify Voltage Requirements: Check the range's specifications to ensure that your electrical supply matches the required voltage (usually 120V).
- Connect the Power Supply: If the range requires hardwiring, connect the electrical supply cable to the range’s terminal block. If using a plug, ensure it fits securely into a grounded outlet.

Step 4: Install the Anti-Tip Bracket

- Locate the Anti-Tip Bracket: This is a crucial safety feature that prevents the range from tipping over.
- Mark the Position: Using a level, mark where the bracket will be installed on the wall or floor.
- Secure the Bracket: Use screws to secure the bracket in place. Make sure it is firmly anchored.

Step 5: Position the Range

- Move the Range into Place: Carefully slide the range into its designated spot. Ensure that it is level and aligned with the countertop.
- Attach to the Anti-Tip Bracket: Once in position, secure the range to the anti-tip bracket according to the manufacturer’s instructions.

Step 6: Level the Range

- Adjust the Leveling Feet: If the range is not level, adjust the leveling feet at the base until it is perfectly level from front to back and side to side.
- Double-Check Stability: Ensure that the range is stable and does not rock when pressure is applied to the front.

Step 7: Final Checks and Adjustments

- Reconnect the Gas Supply: If it was shut off, turn the gas supply back on.
- Test the Burners: Turn on each burner to ensure they ignite properly and that there are no gas leaks.
- Test the Oven: Set the oven to a low temperature and allow it to preheat to check for proper functionality.
