Installation Procedure

Now that you are prepared, let's break down the installation procedure into manageable steps.

Step 1: Choose the Location

Selecting the right location for your Goodman air handler is vital. Consider the following factors:

- **Accessibility:** Ensure the unit is easily accessible for maintenance and repairs.
- **Space:** Allow for adequate clearance around the unit, as specified in the manual.
- **Level Surface:** The installation surface should be level to ensure proper operation.

Step 2: Install the Air Handler Unit

1. **Position the Unit:** Carefully lift the air handler into the chosen location. You may need assistance for larger units.
2. **Level the Unit:** Use a level to ensure the air handler is perfectly horizontal. Adjust as necessary with shims.
3. **Secure the Unit:** Fasten the air handler to the floor or mounting brackets to prevent movement.

Step 3: Connect the Ductwork

Proper ductwork connections are crucial for efficient airflow. Follow these steps:

1. **Measure Duct Sizes:** Ensure that the duct sizes match the air handler specifications.
2. **Cut Ducts as Needed:** Use a duct cutter to make necessary adjustments.
3. **Seal Ducts:** Use duct tape or mastic sealant to seal all joints and connections thoroughly.
4. **Attach Ducts:** Connect the ducts to the air handler, ensuring they fit securely.

Step 4: Electrical Connections

Electrical connections should be carried out with caution. If you are not comfortable working with electricity, consider hiring a professional electrician.

1. **Turn Off Power:** Ensure that power to the unit is turned off at the circuit

breaker.

2. **Connect Wiring:** Follow the wiring diagrams provided in the Goodman air handler installation manual.
3. **Secure Connections:** Use electrical tape to secure all connections and ensure they are well-insulated.

Step 5: Install the Drainage System

Proper drainage is critical to prevent water damage and ensure the longevity of your air handler.

1. **Locate the Drain Pan:** Install the drain pan under the air handler as indicated in the manual.
2. **Connect Drain Line:** Attach the drain line to the pan, ensuring it runs downhill to facilitate drainage.
3. **Test for Leaks:** After installation, check all connections for leaks.

Final Steps and Testing

Once the installation process is complete, it's time to conduct final checks and testing.

Step 6: Check System Operation

1. **Restore Power:** Turn the power back on at the circuit breaker.
2. **Test the Air Handler:** Set the thermostat and observe the air handler's operation, ensuring it responds correctly.
3. **Check Airflow:** Ensure that airflow is consistent and that there are no unusual noises.
