## INTRODUCTION

What do the flu, HIV, and coronaviruses have in common, and how are they different? You'll learn more about these and other viruses in the [Virus Explorer](#) Click & Learn. In the Click & Learn, you can explore the structures and biology of 10 different viruses, as well as how these viruses impact humans and other organisms.

## PROCEDURE

Follow the instructions as you proceed through the Click & Learn, and answer the questions in the spaces provided.

1. Open the [Virus Explorer](#) Click & Learn and click on the "About" tab at the bottom. Use the information in this tab to answer the following questions.

- a. List **four** ways in which viruses can differ from each other.

Transmission mechanism, Genetic makeup, families, host range

- b. In the table below, describe what each abbreviation in this Click & Learn means.

Abbreviation	Description
nm	Nanometers
bp	Base pairs
ss	single-stranded
ds	double-stranded

2. Close the "About" tab and return to the main page. Find the "I" icon next to each viral characteristic across the top. Click on each icon to learn more about that characteristic, then answer the associated question below.

- a. **Envelope:** The envelope is an outer layer that some, but not all, viruses have. How does an envelope form?

It took the outer layer from a host cell

- b. **Host(s):** From the virus's perspective, why is the host important?

It allows the virus to replicate
