Weight Checks

- Weigh your cat every 2-4 weeks.
- Keep a record of your cat's weight to observe trends.
- If your cat is not losing weight as expected, consult your veterinarian for advice.

Body Condition Score (BCS)

Using a Body Condition Score chart can help assess your cat's body fat and overall condition. Here's a simple guideline:

- 1-3: Underweight
- 4-5: Ideal weight
- 6-9: Overweight to obese

Aim for a Body Condition Score of 4-5 for a healthy weight.

Feeding Tips for Success

To maximize the benefits of Hill's Metabolic cat food and ensure your cat achieves its weight goals, consider the following tips:

1. **Regular Feeding Schedule:** Establish a consistent feeding routine. Cats thrive on routine, and a regular schedule can help manage hunger.
2. **Measure Food:** Use a measuring cup to serve the correct portion sizes. Avoid free-feeding to control calorie intake.
3. **Limit Treats:** Treats can add extra calories that hinder weight loss. If you choose to give treats, opt for low-calorie options and limit the quantity.
4. **Encourage Exercise:** Engage your cat in regular play to promote activity. Use toys that stimulate their hunting instincts, such as laser pointers or feather wands.
5. **Hydration:** Ensure your cat has access to fresh water at all times. Proper hydration is essential for weight loss and overall health.
