2. Functionalism: In contrast to structuralism, functionalism, championed by William James, emphasized the purpose of mental processes and how they help individuals adapt to their environments.
3. Behaviorism: Pioneered by John B. Watson and B.F. Skinner, behaviorism shifted the focus from the mind to observable behavior, arguing that all behavior is learned through interaction with the environment.
4. Psychoanalysis: Sigmund Freud's psychoanalytic theory introduced the concept of the unconscious mind and emphasized the role of childhood experiences in shaping behavior and personality.
5. Humanistic Psychology: This approach, associated with Carl Rogers and Abraham Maslow, emphasized personal growth, self-actualization, and the inherent goodness of people.

The Different Branches of Psychology
