Common Exercises and Their Solutions

When studying Java, students will encounter various types of exercises. Here are some common exercises found in the 9th edition, along with a brief overview of how to approach them:

1. Basic Java Syntax

- Exercise Example: Write a Java program that prints "Hello, World!" to the console.

- Solution Approach:

```
```java
public class HelloWorld {
 public static void main(String[] args) {
 System.out.println("Hello, World!");
 }
}
```
```

- Explanation: This exercise familiarizes students with the structure of a Java program, including the main method and the syntax for printing to the console.

2. Control Structures

- Exercise Example: Create a program that uses a loop to sum the numbers 1 through 10.

- Solution Approach:

```
```java
public class SumLoop {
 public static void main(String[] args) {
 int sum = 0;
 for (int i = 1; i <= 10; i++) {
 sum += i;
 }
 System.out.println("The sum is: " + sum);
 }
}
```
```

- Explanation: This exercise introduces control structures, specifically loops, and demonstrates how to accumulate values.

3. Object-Oriented Programming

- Exercise Example: Define a class called `Car` with properties and methods, and create an instance of the class.

- Solution Approach:

```
```java
```

```
public class Car {
 private String model;
 private int year;
```

```

 public Car(String model, int year) {
 this.model = model;
 this.year = year;
 }
```

```

 public void displayInfo() {
 System.out.println("Model: " + model + ", Year: " + year);
 }
}
```

```

public class Main {
 public static void main(String[] args) {
 Car myCar = new Car("Toyota Camry", 2020);
 myCar.displayInfo();
 }
}
```
```

- Explanation: This exercise teaches the fundamentals of class design, object instantiation, and method usage in Java.
