Jason Dion A Practice Exams

Which of the following must be combined with a threat to create risk?

A. Malicious actor

B. Mitigation

C. Vulnerability

D. Exploit - correct answer C. Vulnerability

Explanation
OBJ-1.4: A risk results from the combination of a threat and a vulnerability. A vulnerability is a weakness in a device, system, application, or process that might allow an attack to take place. A threat is an outside force that may exploit a vulnerability. Remember, a vulnerability is something internal to your organization's security goals. Therefore, you can control, mitigate, or remediate a vulnerability. A threat is external to your organization's security goals.

A. A threat could be a malicious actor, a software exploit, a natural disaster, or other external factors. In the case of an insider threat, they are considered an external factor for the purposes of threats and vulnerabilities since their goals lie outside your organization's security goals.

Which of the following commands would NOT provide domain name information and details about a host?

A. dig -x [ip address]

B. host [ip address]

C. nslookup [ipaddress]

D. sc [ip address] - correct answer D. sc [ip address]

Explanation
OBJ-1: Service control (sc) is a Windows command that allows you to create, start, stop, query, or delete a Windows service. The dig command will give you information on when a query was performed, the details that were sent and what flags were sent as well. In most cases, host and nslookup will also provide similar information.
