### Installation Steps

1. **Power Off the Garage Door Opener:** Before working on the garage door, ensure the power is turned off to avoid any accidents.
2. **Select the Installation Location:** Choose a location at the bottom of the garage door where the edge sensor will be mounted. It should be aligned with the door's edge for optimal performance.

5. **Wire the Sensor:** Connect the sensor wires to the garage door opener according to the manufacturer's instructions. Typically, this involves connecting the wires to the designated terminals

for the edge sensor.

6. Test the Sensor: Once everything is in place, restore power to the garage door opener and test the sensor by manually obstructing the door as it closes. It should reverse immediately upon detection of an object.

## **Troubleshooting Common Issues**
