Ma And Pa Kettle Math

Comedians Majorie Main and Percy Kilbride star in the 1951 movie *Ma and Pa Kettle Back on the Farm*. Given the task of dividing 25% of an amount of money equally between five people, Ma and Pa claim that each individual will receive 14% of the money. Ma and Pa demonstrate in three ways that 5 x 14 = 25.

Method 1: Pa divides 25 by 5 and gets 14. He states, 5 won't go into 2, so divide 5 into 5 one time. Subtract and get 20. Now divide 5 into 20.	**Method 2:** Ma multiplies 5 x 4 and gets 20. She then multiplies 5 x 1 and gets 5. Adding these two results, she gets 25.	**Method 3:** Checking by addition. Pa adds all of the 5's together, then adds all of the 1's together and gets 25.
$$\begin{array}{r} 14 \\ 5\overline{)25} \\ \underline{-5} \\ 20 \\ \underline{-20} \end{array}$$	$$\begin{array}{r} 14 \\ \underline{\times 5} \\ 20 \\ \underline{+5} \\ 25 \end{array}$$	$$\begin{array}{r} 14 \\ 14 \\ 14 \\ 14 \\ \underline{+14} \\ 25 \end{array}$$ (4+4+4+4+4) + (1+1+1+1+1)=25
