Assessment Methods

Assessment in Mathematics Analysis and Approaches SL is designed to evaluate students' understanding of the material and their ability to apply mathematical concepts effectively. The assessment consists of two main components:

1. Internal Assessment

The internal assessment is a significant component of the overall grade and involves:

- Mathematical Exploration: Students complete an exploration project that allows them to investigate a mathematical topic of their choice. This project should demonstrate their understanding of the mathematical concepts and their ability to apply them in a meaningful way.
- Criteria for Assessment: The exploration is assessed based on criteria such as mathematical understanding, personal engagement, and communication.

2. External Assessment

The external assessment is conducted at the end of the course and includes:

- Examinations: Students take two written exams that test their knowledge and understanding of the course content. These exams may include multiple-choice questions, short-answer questions, and extended-response questions.
- Weighting: The external assessment typically constitutes a significant portion of the final grade, emphasizing the importance of mastering the course material.

Conclusion

Mathematics analysis and approaches sl is a comprehensive course that equips students with essential mathematical skills and knowledge.
