Examples of Substitution Activities in the Workbooks

The Mathletics Instant Workbooks Series K includes a variety of substitution activities designed to engage young learners and reinforce the concept in a playful manner. Here are some examples:

1. Number Replacement Games

In these activities, students are presented with simple equations or number patterns where they must replace a missing number. For example, a worksheet might present the equation " $5 + \underline{\quad} = 8$," prompting students to substitute the correct number.

2. Picture Matching

Students may be asked to match pictures with numbers or quantities. For instance, they can substitute pictures of apples for the number 3, reinforcing the idea of counting and substitution in a visual manner.

3. Story Problems

Story problems often require students to substitute numbers based on the context of the problem. For example, "If you have 4 cookies and eat 2, how many do you have left?" Such problems help students apply substitution in real-life scenarios.

4. Interactive Games

Many workbooks include interactive games where students must substitute numbers in a fun and engaging way. For example, a game might require students to fill in a number grid based on clues provided, promoting both critical thinking and number recognition.
