OBIEE Interview Questions and Answers

OBIEE Interview Questions

Home – OBIEE Interview Questions

Welcome to OBIEE Interview Questions, here we are going to go over some questions you very well might encounter when interviewing for a role which involves the use of Oracle Business Intelligence Enterprise Edition.

Most of these interview questions will fall into one of two categories:

1. Ones which check your understanding of the OBIEE program.
2. Others, which will ask you to explicitly explain how you do something in OBIEE.

The problem with interviews in a tech-related industry is that an employer needs to be 100% confident that you are the right person for the job, and you aren't just winging prior experience on your CV! Other industries may allow you some leeway in interviews, but when it comes to computers programs there will only ever be 1 correct answer, and employers want to make sure you know it!

What often makes answering these questions tricky is that we deal with this program every day, meaning a lot of what we do is based on routine and instinct for the program, and it can be hard to put exactly what we know and do into a concise answer.

Now, let's get into our list of OBIEE interview questions and answers! This list is by no means exhaustive of the questions that you could be asked, but it will certainly give you an idea of what you may be asked come interview time!

OBIEE Interview Questions and Answers

OBIEE Interview Questions & Answers

How would you use the Query Repository Tool?

The query repository tool gives you the option to search for and analyse data from your database according to any given attribute which describes the given set of data (i.e. Catalog, Key, LDAP Server). The objects which appear in your search results can then be edited or deleted once found.

[Answer source.](#)

What is OLTP and OLAP?

OLTP stands for Online Transaction Processing. It is designed for use with business transaction processes and the quick storage, deletion and retrieval of this data. Any data here will be in its normalised form without duplicates.

OLAP stands for Online Analytical Processing. This will usually handle a relatively low volume of transactions in comparison to OLTP, however they will be more complex. Informal stored within an OLAP database will be multi-dimensional and de-normalised.

[Answer source.](#)

Please describe the differences between OBIEE 10g and 11g.

11g is a new and improved version of 10g. Some of the key changes which were implemented include:

Improved automatic memory management.
Addition of Invisible Indexes
Addition of Virtual Columns
Enhanced password security

OBIEE interview questions and answers are crucial for candidates looking to secure a position in the field of Business Intelligence. Oracle Business Intelligence Enterprise Edition (OBIEE) is a comprehensive suite of tools that enables organizations to analyze and visualize data effectively. As the demand for data-driven insights continues to grow, preparing for an OBIEE interview becomes imperative. This article outlines common interview questions and provides detailed answers to help candidates demonstrate their knowledge and expertise in OBIEE.

Understanding OBIEE

Before diving into specific interview questions, it's essential to understand what OBIEE is and its core components.

What is OBIEE?

Oracle Business Intelligence Enterprise Edition (OBIEE) is a robust business intelligence tool that allows users to perform data analysis, create reports, and develop dashboards. It provides a unified interface for reporting and analytics, enabling organizations to make informed decisions based on real-time data.

Core Components of OBIEE

OBIEE comprises several key components, including:

- BI Server: This is the core engine that processes queries and retrieves data from various sources.
- BI Presentation Services: This component handles the presentation layer, allowing users to create and interact with reports and dashboards.
- BI Administration Tool: This tool is used for metadata modeling and managing data sources.
- BI Publisher: A reporting tool that enables users to create highly formatted reports.
- Smart View: An Excel add-in that allows users to access and analyze data from within Microsoft Excel.

Common OBIEE Interview Questions

Here are some of the most frequently asked OBIEE interview questions, along with detailed answers.

1. What are the key features of OBIEE?

OBIEE offers several key features that distinguish it from other BI tools:

- Ad-hoc Reporting: Users can create reports without needing deep technical knowledge.
- Dashboard Creation: Users can create interactive dashboards that provide a holistic view of data.
- Data Visualization: OBIEE supports various data visualization options like graphs, charts, and maps.
- Mobile Access: Users can access OBIEE reports and dashboards on mobile devices.
- Security: OBIEE provides robust security features to control user access to data and reports.

2. What is the difference between a Logical Table and a Physical Table in OBIEE?

- Physical Table: This refers to the actual tables in the database where the data is stored. They correspond directly to the underlying data structure.
- Logical Table: This is an abstraction layer in the OBIEE repository that

allows users to define relationships between different physical tables. It enables users to create a business-oriented view of the data.

3. Explain the purpose of the BI Administration Tool.

The BI Administration Tool is a key component of OBIEE used for:

- Metadata Management: It allows developers to create and modify the metadata layer of the OBIEE repository.
- Data Modeling: Users can define logical and physical table structures, create joins, and establish hierarchies.
- Repository Configuration: It enables the configuration of security settings, user roles, and permissions.
- Testing: Users can test their queries and changes in a controlled environment before deploying them to production.

4. What is a repository in OBIEE, and what are its types?

In OBIEE, a repository is a file that contains metadata information. There are two types of repositories:

- BMM (Business Model and Mapping) Layer: This layer defines how the data is presented to end-users and how it is related logically.
- Physical Layer: This layer includes the actual data sources, such as databases or flat files, from which data is retrieved.

5. How do you create a dashboard in OBIEE?

Creating a dashboard in OBIEE involves the following steps:

1. Log into the OBIEE Console: Access the BI Presentation Services.
2. Navigate to Dashboards: Click on the "Dashboards" link.
3. Create a New Dashboard: Click on "New" to create a new dashboard.
4. Add Sections and Content: Drag and drop various components such as graphs, tables, and prompts into the dashboard.
5. Save and Test: Save the dashboard and test it to ensure all components are functioning as expected.

6. What is a pivot table in OBIEE?

A pivot table in OBIEE is a type of report that allows users to summarize and analyze data in a tabular format. Users can:

- Drag and Drop Dimensions: Move dimensions into rows or columns to reconfigure the layout.
- Apply Filters: Filter the data displayed in the pivot table.
- Drill Down: Users can drill down into data to view detailed information.

7. Explain the concept of "Drill Down" and "Drill Up" in OBIEE.

- Drill Down: This allows users to view more detailed data by navigating from a summary to lower levels of data. For example, drilling down from yearly sales data to monthly sales data.
- Drill Up: Conversely, this allows users to navigate from detailed data to summary levels. For example, moving from daily sales data to monthly sales data.

8. What are the different types of filters in OBIEE?

OBIEE offers several types of filters:

- Column Filters: Applied directly to columns in a report to limit the data displayed.
- Dashboard Filters: Applied at the dashboard level to affect all reports within the dashboard.
- Session Variables: Used to filter data based on user-specific sessions.
- Request Filters: Applied to individual requests to control what data is returned.

9. How do you implement security in OBIEE?

Security in OBIEE can be implemented through:

- User Roles: Defining user roles and assigning permissions to control access to various parts of the BI application.
- Object Privileges: Assigning privileges at different levels (e.g., data, reports, dashboards) to control what users can see and do.
- Data Security: Implementing row-level security to restrict data access based on user attributes.

10. What are the best practices for optimizing OBIEE performance?

To optimize OBIEE performance, consider the following best practices:

- Use Aggregate Tables: Pre-aggregate data to improve query performance.
- Optimize Queries: Review and optimize SQL queries for efficiency.
- Limit Data Retrieved: Use filters to limit the amount of data returned in reports.
- Schedule Regular Maintenance: Ensure regular maintenance of the OBIEE server and databases to keep performance optimal.

Conclusion

Preparing for an OBIEE interview involves understanding both the technical aspects of the tool and how it fits within the broader context of business

intelligence and data analysis. Familiarizing yourself with common OBIEE interview questions and answers can significantly boost your confidence and improve your chances of success in your job search. By articulating your knowledge of OBIEE's components, functionalities, and best practices, you will be well-equipped to impress interviewers and demonstrate your capability in leveraging this powerful business intelligence tool.

Frequently Asked Questions

What is OBIEE and what are its main components?

OBIEE (Oracle Business Intelligence Enterprise Edition) is a comprehensive business intelligence platform that provides tools for reporting, analysis, and dashboards. Its main components include BI Server, BI Presentation Services, BI Scheduler, and Oracle BI Administration Tool.

How does the Oracle BI Server handle data?

The Oracle BI Server uses a unique query processing engine that allows it to access data from multiple sources, including relational databases, OLAP sources, and flat files. It aggregates, transforms, and optimizes data to provide a unified view for users.

What is a logical table in OBIEE?

A logical table in OBIEE represents a collection of related data that can be queried. It is defined in the Business Model and Mapping layer, allowing users to define how physical tables from the database correspond to the logical view presented to users.

What are some common types of prompts used in OBIEE dashboards?

Common types of prompts in OBIEE dashboards include column prompts, dashboard prompts, and date prompts. These allow users to filter data dynamically and customize their reports based on specific criteria.

Explain the difference between 'repository' and 'catalog' in OBIEE.

In OBIEE, the 'repository' (RPD file) is where the metadata is stored, including data models and business logic. The 'catalog', on the other hand, is where the actual reports, dashboards, and other BI content are stored and managed for end users.

What is the significance of the BI Administration Tool in OBIEE?

The BI Administration Tool is a critical component of OBIEE used for creating and managing the repository (RPD). It allows developers to define data models, establish relationships, create measures and dimensions, and configure security settings.

Obiee Interview Questions And Answers

obiee - Correct Syntax for optional multi-select parameter in BIP ...

Dec 14, 2022 · I have a query that was written as a Data Analysis in Oracle OTBI, and I am using it inside of BIP Data Model and I am structuring parameters for the Oracle BI EE logical SQL. ...

Understanding evaluate function in OBIEE - Stack Overflow

The Evaluate function enables you to send a function to the database to evaluate and return data to OBIEE. For security purposes you must use references in the function rather than the ...

OBIEE 12c - cannot login to analytics - Stack Overflow

Apr 13, 2017 · Able to access OBIEE Console and EM but unable to login to Analytics. I have already scratched my head over searching for solutions all over. Any suggestion would help ...

OBIEE: filter that supports "LIKE" and "IN" - Stack Overflow

Mar 7, 2018 · OBIEE: How can I make a filter that supports "LIKE" and "IN", so for example, the user can enter in the analysis prompt either A3% or A31;A34;A3C 1) This works for IN: ...

OBIEE12c answers encounter an Odbc driver error

Aug 24, 2021 · After migrating OBIEE from 11g to 12c, BI answers encounter the following error. Odbc driver returned an error (SQLExecDirectW). State: HY000. Code: 10058. [NQODBC ...

obiee - nQSError: 14025 No fact table exists at the requested level ...

Jun 24, 2016 · the analysis was working on version 10, after migration to version 11, it started giving error [nQSError: 14025] No fact table exists at the requested level of detail

obiee - OBIEE12C: NULL appearing as option in dashboard prompt ...

Jul 1, 2022 · I have a dashboard prompt with various fields to allow the client to filter the data by year, quarter, month. I have my own development environment and when I test the prompt in ...

obiee - how to pick up a the newest record from a list of values in ...

Mar 20, 2018 · I have a requirement to write a code in OBIEE analysis to pick the newest score for a candidate, such that if 01/05/2018 the took a test and scored say 75 then retook the ...

obiee - Passing multiple values through a Presentation Variable in ...

Dec 9, 2019 · I have created multiple Direct Database Requests in OBIEE, I am able to pass a presentation variable to a Dashboard Prompt. However I am only able to select one value, if I ...

obiee - obiee12c RCU creation fails with oracle database 19c

Aug 12, 2021 · I have installed OBIEE12c(12.2.1.4). OBIEE12c certification matrix says RCU creation utility supports oracle database 19c. However, when I run RCU creation utility it fail ...

obiee - Correct Syntax for optional multi-select parameter in BIP ...

Dec 14, 2022 · I have a query that was written as a Data Analysis in Oracle OTBI, and I am using it

inside of BIP Data Model and I am structuring parameters for the Oracle BI EE logical SQL. ...

Understanding evaluate function in OBIEE - Stack Overflow

The Evaluate function enables you to send a function to the database to evaluate and return data to OBIEE. For security purposes you must use references in the function rather than the ...

OBIEE 12c - cannot login to analytics - Stack Overflow

Apr 13, 2017 · Able to access OBIEE Console and EM but unable to login to Analytics. I have already scratched my head over searching for solutions all over. Any suggestion would help ...

OBIEE: filter that supports "LIKE" and "IN" - Stack Overflow

Mar 7, 2018 · OBIEE: How can I make a filter that supports "LIKE" and "IN", so for example, the user can enter in the analysis prompt either A3% or A31;A34;A3C 1) This works for IN: ...

OBIEE12c answers encounter an Odbc driver error

Aug 24, 2021 · After migrating OBIEE from 11g to 12c, BI answers encounter the following error. Odbc driver returned an error (SQLExecDirectW). State: HY000. Code: 10058. [NQODBC ...
