Academic Programs

The Penn State College of Agriculture offers a wide array of undergraduate

and graduate programs that prepare students for careers in various agricultural and related fields. The college is divided into several departments, each specializing in different aspects of agricultural education and research.

Undergraduate Programs

Students can choose from a range of undergraduate majors, including but not limited to:

- Animal Science: Focuses on livestock management, animal behavior, and genetics.
- Plant Science: Covers plant biology, horticulture, and crop production.
- Food Science: Involves the study of food safety, processing, and quality control.
- Environmental Resource Management: Emphasizes sustainable practices in land and resource use.
- Agricultural Business: Combines principles of business and economics with agricultural practices.

Graduate Programs

For those seeking advanced education, the college offers various master's and doctoral programs in fields such as:

- Agronomy: Focuses on crop production and soil management.
- Entomology: Studies insects and their impact on agriculture.
- Soil Science: Delves into soil health, conservation, and land management practices.
- Nutritional Sciences: Examines the relationship between diet, health, and food systems.

Online Learning Opportunities

In recent years, the Penn State College of Agriculture has expanded its offerings to include online degree programs and certificates. These programs cater to working professionals and non-traditional students, allowing them to balance their education with other commitments. Notable online programs include:

- Bachelor of Science in Agricultural and Extension Education
- Master of Professional Studies in Agricultural Extension Education

Research Initiatives

The Penn State College of Agriculture is committed to advancing agricultural research that addresses contemporary challenges faced by the industry. The college engages in interdisciplinary research that spans various domains, including crop and livestock production, food safety, and environmental sustainability.

Research Centers and Institutes

Several research centers and institutes within the college focus on specific areas of study:

- The Agricultural Research and Extension Center: Conducts research on crop production, pest management, and soil health.
- The Center for Pollinator Research: Investigates the role of pollinators in agriculture and their conservation.
- The Penn State Institute for Sustainable Agriculture: Promotes sustainable agricultural practices through research and education.

Collaborative Research Projects

The college frequently collaborates with industry partners, government agencies, and other academic institutions. These collaborations enhance research capabilities and ensure that findings are applicable to real-world agricultural practices. Current research themes include:

- Sustainable Practices: Development of practices that reduce environmental impact while maintaining productivity.
- Precision Agriculture: Use of technology and data analytics to optimize farming operations.
- Food Security: Research focused on increasing food production and improving access to nutritious food.
