TWO VOLTAGE SELECTOR SWITCHES

Only multi-voltage models are provided with these switches. U.S. and Canadian models are not provided with these switches. Mains voltages in Saudi Arabia are 127V and 220V only. Never use this model with 110V setting in Saudi Arabia.

The line voltage selector switches are on the rear panel. Before your model is shipped from the factory, these switches are set to the power requirements of the destination. Check they are set properly before plugging the power cord into the household wall socket. If the voltage is not properly set or if you move to an area where the voltage requirements differ, adjust the selector switches as follows.
1. Use a medium-size screwdriver.
2. First, insert a screwdriver into the groove of the voltage selector at the top, and adjust so that tip of the groove points to the voltage value of your area.
3. Next, insert the screwdriver into the groove of the voltage selector at the bottom and adjust until the voltage is the same as at the top.

Both switches must be in the same switch setting.

CHANNEL STEP SWITCH

Only multi-voltage models are provided with this switch. U.S. and Canadian models are not provided with this switch. (This switch is on the rear panel.)
The unit has been factory preset to the channel allocation for the area in which it is to be sold. If the value is set incorrectly, the frequency display may stop at the wrong frequency, or sound may be distorted, resulting in an inability to reproduce reception signals at their proper sound quality.
For this reason, be sure to confirm that the value is set correctly before first using the unit.
