## Worksheet With Answers

Maths Department

Pythagoras Theorem

Name : \_\_\_\_\_

Class : \_\_\_\_\_

### Worksheet- Pythagoras Theorem

Q1) ABC is an isosceles triangle,  $AB=AC=12$  cm.  $BC=10$  cm. Calculate the perpendicular distance from A to BC.

Q2) Work out the length of AB when coordinates of A are (4,7) and the coordinates of B are (16,12).

Q3) A ladder is 8 metres long. It leans against a wall with one end on the ground 6 metre from the wall. The other end just reaches a windowsill. Calculate the height of the windowsill above the ground.

Page 1

Pythagorean theorem word problems worksheet with answers are essential tools for students learning the fundamental concepts of geometry. The Pythagorean theorem states that in a right triangle, the square of the length of the hypotenuse (the side opposite the right angle) is equal to the sum of the squares of the lengths of the other two sides. This theorem not only forms the basis for many geometric applications but is also a critical component of problem-solving in real-world scenarios. In this article, we will explore various word problems that utilize the Pythagorean theorem, provide a worksheet with answers, and offer tips on how to master these concepts.

# Understanding the Pythagorean Theorem

The Pythagorean theorem is expressed mathematically as:

$$c^2 = a^2 + b^2$$

Where:

- $c$  is the length of the hypotenuse,
- $a$  and  $b$  are the lengths of the other two sides.

This theorem is used extensively in various fields, including architecture, engineering, and physics, making it invaluable for both students and professionals alike.

## Real-World Applications of the Pythagorean Theorem

The Pythagorean theorem can be applied to numerous real-world situations, such as:

- Determining the height of a tree or building.
- Finding the distance between two points on a coordinate plane.
- Calculating the length of a diagonal in a rectangular space.
- Solving problems involving navigation and mapping.

Understanding how to apply the theorem in these contexts is crucial for solving word problems effectively.

## Pythagorean Theorem Word Problems

To help students practice, we'll present a variety of word problems that can be solved using the Pythagorean theorem. Each problem will be followed by a detailed explanation and the answer.

### Problem 1: Finding the Length of a Ladder

A ladder is leaning against a wall. The base of the ladder is 6 feet away from the wall, and the top of the ladder touches the wall at a height of 8 feet. How long is the ladder?

Solution:

In this problem, we can visualize the ladder, the wall, and the ground forming a right triangle. Here, the height of the wall (8 feet) is one side of the triangle, the distance from the wall (6 feet) is the other side, and the ladder is the hypotenuse.

Using the Pythagorean theorem:

$$c^2 = a^2 + b^2$$

Substituting the values:

$$c^2 = 8^2 + 6^2$$

$$c^2 = 64 + 36$$

$$c^2 = 100$$

$$c = \sqrt{100}$$

$$c = 10$$

The length of the ladder is 10 feet.

## Problem 2: The Diagonal of a Rectangle

A rectangular garden measures 12 feet in length and 9 feet in width. What is the length of the diagonal of the garden?

Solution:

We can treat the length and width of the rectangle as the two sides of a right triangle, with the diagonal as the hypotenuse.

Using the Pythagorean theorem:

$$c^2 = a^2 + b^2$$

Substituting the values:

$$c^2 = 12^2 + 9^2$$

$$c^2 = 144 + 81$$

$$c^2 = 225$$

$$c = \sqrt{225}$$

$$c = 15$$

The length of the diagonal is 15 feet.

## Problem 3: Distance Between Two Points

Two points, A and B, are located at (3, 4) and (7, 1) on a coordinate plane. What is the distance between these two points?

Solution:

To find the distance between the two points, we can use the difference in the x-coordinates and y-coordinates to form a right triangle.

The horizontal distance (x) is:

$$\sqrt{|7 - 3|} = 4$$

The vertical distance (y) is:

$$\sqrt{|1 - 4|} = 3$$

Now we apply the Pythagorean theorem:

$$\sqrt{c^2 = a^2 + b^2}$$

Substituting the values:

$$\sqrt{c^2 = 4^2 + 3^2}$$

$$\sqrt{c^2 = 16 + 9}$$

$$\sqrt{c^2 = 25}$$

$$\sqrt{c = \sqrt{25}}$$

$$\sqrt{c = 5}$$

The distance between points A and B is 5 units.

## Creating a Pythagorean Theorem Worksheet

A worksheet that includes various Pythagorean theorem word problems can be a valuable resource for practice. Here's a sample worksheet you can create:

Worksheet: Pythagorean Theorem Word Problems

1. A right triangle has legs of lengths 7 cm and 24 cm. What is the length of the hypotenuse?
2. A triangle has one side measuring 15 inches and the hypotenuse measuring 17 inches. What is the length of the other side?
3. A baseball diamond is a square with each side measuring 90 feet. What is the distance from home plate to second base?
4. A person walks 3 miles north and then 4 miles east. How far are they from their starting point?

5. A television screen has a width of 32 inches and a height of 24 inches. What is the diagonal length of the screen?

Answers:

1. 25 cm
2. 8 inches
3. 127.28 feet (approximately)
4. 5 miles
5. 39.29 inches (approximately)

## Tips for Solving Pythagorean Theorem Problems

Here are some tips to help students tackle Pythagorean theorem word problems effectively:

- Always draw a diagram. Visualizing the problem can make it easier to understand.
- Identify the right triangle and label the sides accurately.
- Write down the Pythagorean theorem before substituting the values.
- Check your work by plugging the values back into the equation.
- Practice regularly with different types of problems to build confidence.

## Conclusion

**Pythagorean theorem word problems worksheets with answers** provide a structured way for students to practice and apply their knowledge of the theorem. Through engaging problems that relate to real-world scenarios, students can develop a deeper understanding of geometry. By mastering these concepts, learners will not only excel in their studies but also gain skills that are useful in everyday life. Whether you are a teacher preparing resources for your class or a student looking for practice, utilizing these worksheets is a great way to reinforce the principles of the Pythagorean theorem.

## Frequently Asked Questions

## **What is a Pythagorean theorem word problem?**

A Pythagorean theorem word problem involves real-life scenarios where you can apply the theorem to find the lengths of sides in a right triangle.

## **How do you solve a Pythagorean theorem word problem?**

To solve a Pythagorean theorem word problem, identify the right triangle, assign variables to the unknown sides, use the formula  $a^2 + b^2 = c^2$ , and solve for the unknown.

## **What types of scenarios are commonly used in Pythagorean theorem word problems?**

Common scenarios include finding distances, height of objects using shadows, ladder problems, and navigation problems involving right triangles.

## **Can you provide an example of a Pythagorean theorem word problem?**

Sure! If a ladder is leaning against a wall and the foot of the ladder is 3 feet away from the wall while the ladder reaches a height of 4 feet, what is the length of the ladder?

## **What is the answer to the example Pythagorean theorem problem?**

Using the theorem:  $a^2 + b^2 = c^2$ ; here,  $3^2 + 4^2 = c^2$  leads to  $9 + 16 = c^2$ , so  $c = 5$  feet. The ladder is 5 feet long.

## **Are there worksheets available for practicing Pythagorean theorem word problems?**

Yes, many educational websites offer worksheets specifically designed for practicing Pythagorean theorem word problems, complete with answers.

## **What skills do students develop by solving Pythagorean theorem word problems?**

Students develop problem-solving skills, critical thinking, and an understanding of the geometric relationships in right triangles.

## **How can teachers evaluate understanding of the Pythagorean theorem through word problems?**

Teachers can assess understanding by giving students various word problems to solve, checking their ability to set up the equations correctly and interpret the results.

## Where can I find Pythagorean theorem word problems with answers?

You can find Pythagorean theorem word problems with answers in math textbooks, online educational platforms, and printable worksheets from math resource websites.
