How Rocks Are Formed

Melted rock called magma is deep within the earth. When magma comes up through openings in the earth's crust, it is called lava. Lava cools to form hard **igneous** (IG nee us) rocks.

Wind and water break rocks into small pieces. The small pieces settle at the bottom of rivers and oceans. These layers of sediment harden to form **sedimentary** (sed uh MEN tuh ree) rocks.

Heat and pressure deep inside the earth can cause igneous and sedimentary rocks to change. Rocks that are changed are called **metamorphic** (met uh MOR fik) rocks.
