The breathing method encompasses a wide range of techniques, each with its unique focus and benefits. Here are some of the most popular types:

### 3. Alternate Nostril Breathing

A practice rooted in yoga, alternate nostril breathing involves inhaling through one nostril while closing the other and then switching. This method is said to balance the body's energy and promote mental clarity.

## 4. 4-7-8 Breathing

Developed by Dr. Andrew Weil, the 4-7-8 technique involves inhaling for four seconds, holding the breath for seven seconds, and exhaling for eight seconds. This method is designed to induce relaxation and improve sleep quality.

## 5. Wim Hof Method

The Wim Hof Method combines controlled hyperventilation, breath retention, and cold exposure. Practitioners claim it can enhance physical performance, boost energy levels, and improve resilience to stress.
