 - **Obesity:** HFCS is calorie-dense and provides little nutritional value, leading to weight gain.
 - **Diabetes:** High sugar intake can lead to insulin resistance and type 2 diabetes.
 - **Heart Disease:** Diets high in added sugars are associated with increased risk factors for heart disease.
3. **Regulatory Measures:** Various health organizations have called for regulations on the use of HFCS in food products. Public awareness campaigns aim to educate consumers about the potential risks associated with high sugar consumption.
