TESTING

To test operation during daylight, cover the photo control with black tape. Turn on the power. The light will take up to ten minutes to reach full brightness. Remove the tape from the photo control and your unit will operate automatically—on at dusk, off at dawn.

In Case of Difficulty

If your floodlight does not turn on automatically or cycles on and off, it could be affected by other nearby lights or is seeing its own light. In either case, loosen the plastic nut that secures the photocontrol. Slide the metal reflector under the nut so that the reflector causes the photocontrol to look away from nearby lights or reflective surfaces and retighten the plastic nut.

⚠ WARNING - Risk of fire. Do not aim the bulbs at a combustible surface within 3 ft. (1 m).
