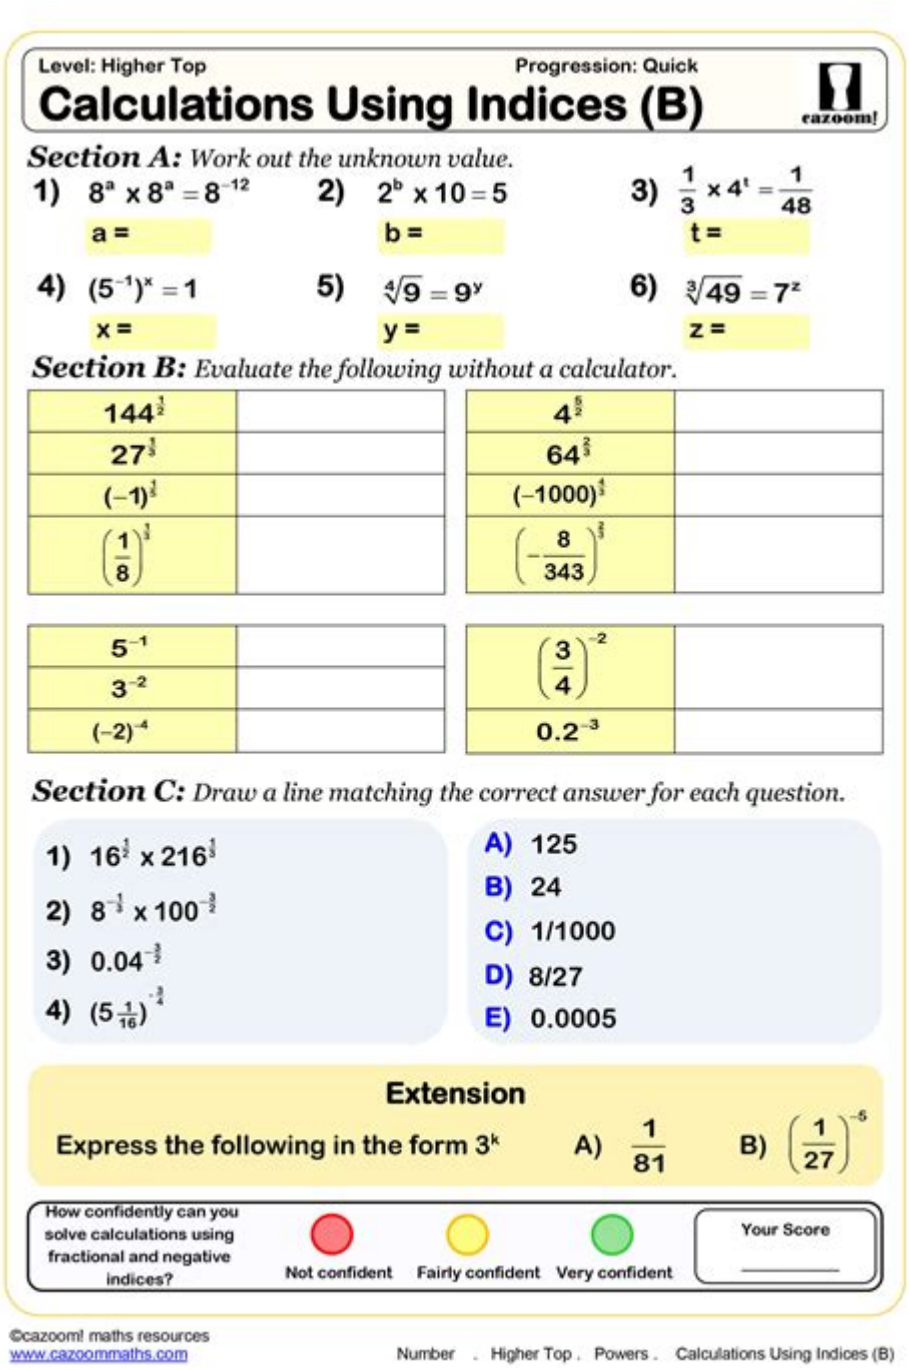
Year 10 Maths Questions And Answers



Level: Higher Top — Progression: Quick

Calculations Using Indices (B)

cazoom!

Section A: *Work out the unknown value.*

1) $8^a \times 8^a = 8^{-12}$ — a =

2) $2^b \times 10 = 5$ — b =

3) $\frac{1}{3} \times 4^t = \frac{1}{48}$ — t =

4) $(5^{-1})^x = 1$ — x =

5) $\sqrt[4]{9} = 9^y$ — y =

6) $\sqrt[3]{49} = 7^z$ — z =

Section B: *Evaluate the following without a calculator.*

$144^{\frac{1}{2}}$		$4^{\frac{5}{2}}$	
$27^{\frac{1}{3}}$		$64^{\frac{2}{3}}$	
$(-1)^{\frac{1}{5}}$		$(-1000)^{\frac{1}{3}}$	
$\left(\frac{1}{8}\right)^{\frac{1}{3}}$		$\left(-\frac{8}{343}\right)^{\frac{1}{3}}$	

5^{-1}		$\left(\frac{3}{4}\right)^{-2}$	
3^{-2}			
$(-2)^{-4}$		0.2^{-3}	

Section C: *Draw a line matching the correct answer for each question.*

1) $16^{\frac{1}{2}} \times 216^{\frac{1}{3}}$
2) $8^{-\frac{1}{3}} \times 100^{-\frac{3}{2}}$
3) $0.04^{-\frac{3}{2}}$
4) $(5\frac{1}{16})^{-\frac{3}{4}}$

A) 125
B) 24
C) 1/1000
D) 8/27
E) 0.0005

Extension

Express the following in the form 3^k A) $\frac{1}{81}$ B) $\left(\frac{1}{27}\right)^{-5}$

How confidently can you solve calculations using fractional and negative indices? Not confident — Fairly confident — Very confident

Your Score _____

Number . Higher Top . Powers . Calculations Using Indices (B)

Year 10 maths questions and answers are essential tools for students aiming to solidify their understanding of mathematical principles and prepare for examinations. This article will provide a comprehensive overview of the key topics covered in Year 10 mathematics, along with sample questions and answers to illustrate each concept. By the end, students will have a clearer understanding of what to expect in their Year 10 maths curriculum.

Key Topics in Year 10 Mathematics

Year 10 mathematics typically covers a range of topics, including:

1. Algebra
2. Geometry
3. Trigonometry
4. Statistics and Probability
5. Financial Mathematics
6. Functions and Graphs

Each of these areas plays a crucial role in developing a student's mathematical skills. The following sections will delve deeper into these topics, providing sample questions and answers.

Algebra

Algebra involves the study of numbers through symbols and letters. It is foundational for solving equations and understanding relationships between variables.

Sample Questions

1. Solve for x in the equation: $2x + 3 = 11$.

Answer:
- Subtract 3 from both sides: $2x = 8$
- Divide by 2: $x = 4$

2. Expand the expression: $(x + 5)(x - 2)$.

Answer:
- Use the distributive property: $x^2 - 2x + 5x - 10 = x^2 + 3x - 10$

3. Factorize the quadratic: $x^2 - 9$.

Answer:
- This is a difference of squares: $(x - 3)(x + 3)$

Geometry

Geometry focuses on the properties and relationships of shapes and spaces. It includes concepts such as angles, triangles, circles, and area.

Sample Questions

1. Calculate the area of a triangle with a base of 10 cm and a height of 5 cm.

Answer:
- Area = (base × height) / 2 = (10 × 5) / 2 = 25 cm^2

2. What is the circumference of a circle with a radius of 7 cm? (Use π ≈ 3.14)

Answer:
- Circumference = 2πr = 2 × 3.14 × 7 = 43.96 cm

3. If two angles in a triangle are 50° and 60°, what is the third angle?

Answer:
- The sum of angles in a triangle is 180°: 180 - (50 + 60) = 70°

Trigonometry

Trigonometry deals with the relationships between the angles and sides of triangles, especially right-angled triangles.

Sample Questions

1. In a right triangle, if one angle is 30° and the hypotenuse is 10 cm, what is the length of the side opposite the 30° angle?

Answer:
- Using the sine function: sin(30°) = opposite/hypotenuse
- Thus, opposite = hypotenuse × sin(30°) = 10 × 0.5 = 5 cm

2. Calculate the cosine of a 45° angle.

Answer:
- cos(45°) = √2/2 or approximately 0.7071

3. If the tangent of an angle is 3/4, what is the angle in degrees?

Answer:
- Use the arctan function: angle = arctan(3/4) ≈ 36.87°

Statistics and Probability

Statistics and probability involve collecting, analyzing, interpreting, presenting, and organizing data.

Sample Questions

1. Find the mean of the following set of numbers: 4, 8, 6, 5, 3.

Answer:
- Mean = (4 + 8 + 6 + 5 + 3) / 5 = 26 / 5 = 5.2

2. A bag contains 5 red balls and 3 blue balls. What is the probability of randomly selecting a red ball?

Answer:
- Probability = (Number of red balls) / (Total number of balls) = 5 / (5 + 3) = 5/8

3. If the median of a data set is 15 and the data set is: 10, 12, 14, x, 20, what is the value of x?

Answer:
- The median is the average of the two middle numbers. Thus, x must be 16 to ensure the median remains 15.

Financial Mathematics

Financial mathematics involves calculations related to money management, including interest rates, savings, loans, and investments.

Sample Questions

1. If you invest $1,000 at an interest rate of 5% per annum for 3 years, how much will you have at the end? (Using simple interest)

Answer:
- Simple Interest = Principal × Rate × Time = 1000 × 0.05 × 3 = $150
- Total Amount = Principal + Interest = 1000 + 150 = $1150

2. What is the final amount if $500 is invested at an annual compound interest rate of 4% for 2 years?

Answer:

- A = P(1 + r/n)^(nt) where A = amount, P = principal, r = rate, n = number of times interest applied per time period, t = number of time periods.
- Assuming interest is compounded annually: A = 500(1 + 0.04/1)^(1×2) = 500(1.04)² = 500 × 1.0816 = $540.80

Functions and Graphs

Functions and graphs involve understanding how to represent mathematical relationships visually and algebraically.

Sample Questions

1. What is the output of the function f(x) = 2x + 3 when x = 4?

Answer:
- f(4) = 2(4) + 3 = 8 + 3 = 11

2. Sketch the graph of the linear function y = 2x + 1. What is the y-intercept?

Answer:
- The y-intercept is the value of y when x = 0: y = 2(0) + 1 = 1. The graph is a straight line with a slope of 2.

3. If g(x) = x² - 4, what are the roots of the equation g(x) = 0?

Answer:
- Set x² - 4 = 0: x² = 4
- Thus, x = ±2. The roots are -2 and 2.

Conclusion

Year 10 maths questions and answers cover a wide range of topics, each interlinked and fundamental to the understanding of higher-level mathematics. Mastery of these concepts not only prepares students for examinations but also builds a solid foundation for future studies in mathematics. Regular practice with these types of questions will enhance students' problem-solving skills and confidence in the subject. Students are encouraged to refer back to this guide frequently as they progress through their Year 10 mathematics curriculum.

Frequently Asked Questions

What is the formula to calculate the area of a triangle?

The area of a triangle can be calculated using the formula: Area = 1/2 × base × height.

How do you solve quadratic equations using the quadratic formula?

To solve a quadratic equation $ax^2 + bx + c = 0$, use the quadratic formula: $x = (-b \pm \sqrt{(b^2 - 4ac)}) / (2a)$.

What is the Pythagorean theorem and how is it used?

The Pythagorean theorem states that in a right-angled triangle, $a^2 + b^2 = c^2$, where c is the hypotenuse. It's used to find the length of a side.

How can you find the median of a set of numbers?

To find the median, arrange the numbers in ascending order and then locate the middle number. If there are two middle numbers, average them.

What are the properties of similar triangles?

Similar triangles have corresponding angles that are equal and corresponding sides that are in proportion.

How do you convert a fraction to a decimal?

To convert a fraction to a decimal, divide the numerator by the denominator.

What is the difference between the mean and median?

The mean is the average of a set of numbers, calculated by dividing the sum by the count, while the median is the middle value when the numbers are ordered.

How do you factor a quadratic expression?

To factor a quadratic expression $ax^2 + bx + c$, find two numbers that multiply to ac and add to b, then rewrite the expression using those numbers.

What is the formula for the circumference of a circle?

The circumference of a circle can be calculated using the formula: Circumference = $2\pi r$, where r is the radius.
